

# SMART SOLUTIONS FOR NURSERY HYGIENE

GOOD HYGIENE PROMOTES GOOD ATTENDANCE

Hand hygiene may be the most important means to prevent the spread of infection, but it's not the only one. Other critical factors include:

- Sanitising objects that are handled frequently
- Minimising physical contact with un-sanitised surfaces
- Proper disposal of waste materials
- Avoidance of unsanitary food products
- Covering the mouth and nose when coughing and sneezing

Germs are opportunistic and will take any chance they get to infect a potential host. The effective reduction of contamination is the result of a well thoughtout, well executed plan that addresses all the common - and many of the less common - ways that germs can spread.

**Purell® Pal Instant Hand Sanitiser** is a fun way to encourage pre-school children to adopt a hand hygiene programme. Already NHS approved, this is an easy to use sanitising gel that is easily absorbed into the skin.

Available in multiple dispenser formats, including freestanding dispensers that can be placed anywhere in the premises.

PURELL is a registered trademark of Johnson & Johnson and is used under licence

An excellent learning programme is critical to any pre-school nursery for the education and development of children. But have you ever thought that an excellent hygiene programme is just as important? It is a well-known fact that children are susceptible to germs and bacteria as their immune system is developing. They are immunised against diseases such as measles, mumps and rubella, but what about the more common pathogens, including cold & flu viruses, E-Coli and Salmonella? Even the most spotless looking surface can harbour billions of microscopic threats - germs, viruses, bacteria and more. You may not be able to see them, but they are there, which is why it is so important that you partner with a provider who has the tools, training and techniques to address these unseen dangers. Below are just some of the products and services that Swisher can provide to help your pre-school environment stay as safe and as healthy as possible.

**NAPPY DISPOSAL SERVICE** - We can provide a lockable bin to dispose of your nappy waste. You have your own bin for the duration of the contract and when emptied, it will also be sanitised using our hospital-grade sanitiser, so you know that the bin stays as clean as possible. Available in a variety of sizes and colours.

**FOAMING HAND SOAP** - A fun, easy-to-use antibacterial foaming soap to encourage handwashing. Ultra Mild soap is also available, which does not contain any perfumes or dye. Available for use in traditional or touch-free dispensers. A 'germ' sticker can be provided on the dispensers to encourage the children to wash away the germs!

**SWAT** - SWisher Anti-microbial Treatment.

Our micro-diffuser creates a dry mist, ensuring a thorough, even distribution of hospital-grade germicide in even the hardest to reach areas. The germicide is clinically shown to kill 99.9% of all common pathogens, including MRSA, cold & flu viruses, E-coli, Salmonella, Avian Flu and more. Safe to use on furniture and electrical equipment.

**SWISHER TOTAL IMAGE™** - A deep-penetrating detailing system that delivers a powerful jet of sanitising solution, from floors to ceilings & everywhere inbetween. Can be utilised in the washrooms, kitchen, changing rooms, lobby areas, medical rooms and classrooms.

We can help identify a cleaning regime to keep you and your pupils safe and maintain your hygiene standards.

**Other products and services include: Weekly Sanitation Service, Feminine Hygiene Service, Odour Control, Water Management Systems and Paper Products**
