

HEALTHY SOLUTIONS FOR SUPERMARKETS

PROTECT YOUR EMPLOYEES. PROTECT YOUR CUSTOMERS.
PROTECT YOUR BUSINESS.

SWISHER TOTAL IMAGE™

Germ and bacteria are everywhere. Even the most spotless looking surface can harbour billions of microscopic threats - germs, bacteria, viruses and more. You may not be able to see them, but they are there.

That's why Swisher has introduced the **Swisher Total Image** system. It is a deep-penetrating detailing system that delivers a powerful jet of sanitising solution, from floors to ceilings & everywhere inbetween. Because the unit recovers the water and chemicals it sprays, there is no liquid residue and because treatments are so thorough, you will eliminate weeks, months or even years of unhygienic accumulation.

The system can be utilised in the washrooms, the shop floor, the warehouse or storage area, offices and kitchen areas.

We can help identify a cleaning regime to keep your employees, your customers and your business as safe and hygienic as possible.

Good hygiene is mission critical for any successful business today - never more so than in supermarkets. Your customers expect a certain standard of cleanliness, especially where food is concerned. Most germs and bacteria are spread through contact and supermarkets probably have the highest volume of footfall after hospitals and shopping centres, which makes them a high hygiene risk and are virtual breeding grounds for bacteria - on shopping trolleys, refrigerator handles, packaging equipment, food counters, washrooms, checkouts, virtually everywhere. Your customers and employees can't see the germs that a proper hygiene programme eliminates, but they can see and feel the effects of proper hygiene. If you partner with a provider who has the tools, training and techniques to address these unseen dangers, it will help maintain your hygiene standards. We can help you identify any unhygienic areas and can tailor a programme of ongoing maintenance that is designed to keep contaminant counts low and promote real results. Below are just some of the products and services that Swisher can provide to help your environment stay as safe and as healthy as possible.

HAND HYGIENE PROGRAMMES

Most germs and bacteria are spread through contact. When produce arrives at your store, it has probably already been handled one or twice prior to arrival, so it is imperative that anymore handling that occurs is done so in the most hygienic and safest way possible. We have a range of products that can help reduce the possibility of cross-contamination, including: Specialist soaps for warehouse staff, hand hygiene for your employees, disposable gloves and hand wipes.

SWAT - SWisher Anti-microbial Treatment.

Our micro-diffuser creates a dry mist, ensuring a thorough, even distribution of hospital-grade germicide in even the hardest to reach areas. The germicide is clinically shown to kill 99.9% of all common pathogens, including MRSA, cold & flu viruses, E-coli, Salmonella, Avian Flu and more. Safe to use on furniture and electrical equipment.

Swisher also provide other products and services including:
Dust/Scrapper Mats, Weekly Sanitation Service, Feminine Hygiene Service, Odour Control, Water Management Systems and Paper Products
