

# TCELL ODOUR CONTROL SYSTEM

EXPERT PRODUCTS & EXPERT PROGRAMMES MAKE ALL THE DIFFERENCE

## THE LATEST INNOVATION IN CONTINUOUS ODOUR CONTROL

Controlling odour is about more than overpowering the senses. Anybody can blast a room with air freshener to keep it smelling clean for a few moments. What really counts is whether a company can provide a solution that lasts for days or weeks at a time.

Swisher Hygiene can. We have partnered with a team of noted chemists to develop air freshener formulas that have been specifically created to counteract odours. The TCell dispenses a consistent level of fragrance and contains an odour neutraliser that physically binds with the offending material and renders it benign.

- Wide selection of aromas
- Eliminates odours rather than masks them
- Engineered for commercial environments
- Long-lasting scents that work 24/7

### PERPETUALLY POWERFUL

We introduce these compounds into the environment by using the natural air flow in a room, ideally placing the TCell 3-6 feet from a doorway. This maintenance free system ensures a constant stream of aroma for a powerful yet pleasant scent all day, for weeks at a time.

- Consistent, even delivery of scent
- Replenished automatically as part of the Hygiene Service
- Makes changing scents easy
- Ecologically friendly - no VOC's, no batteries and with recyclable components

The TCell is a contemporary, attractive design and is tamper-resistant. Available in chrome, white or black to suit any decor.
